SAI KRISHNA GANJI

AI/ML Engineer | Generative AI & Agentic AI

✉saikrishnaganji2124@gmail.com | ☐ Hyderabad, Telangana, India | ☎+91 6309701894 | www.linkedin.com/in/sai-krishna-ganji-265290228

PROFESSIONAL SUMMARY

AI/Software Engineer with hands-on experience building an **AI-based meeting transcription and action-item automation system** using **Python, FastAPI, LangChain, LangGraph, RAG, MCP, and LLMs**.

Strong in **Agentic AI and LLM application development**, including **AI agents, RAG, tool calling, prompt engineering, state management, and multi-step workflows**.

Currently working on making AI systems more **production-ready**, including cloud LLM integration, confidence-based ticket automation, duplicate detection, multi-window transcript processing, LLM evaluation, and observability.

Strong foundation in **Machine Learning**, including **Supervised Learning, Unsupervised Learning, Reinforcement Learning, Regression, Classification, Data Preprocessing, Feature Engineering, Model Evaluation, and Overfitting/Underfitting**.

Foundational knowledge of **Deep Learning**, including **Neural Networks, CNN, RNN, LSTM, Transformers, and Diffusion Models**.

CONCEPTS LEARNED

LangChain Foundations
Prompt templates, chains, tools, agents, streaming, and structured outputs for building LLM workflows.

LangGraph Orchestration
State-based graphs, sequential/conditional workflows, branching, parallel execution, and multi-step agent workflows.

RAG
Document loading, chunking, embeddings, vector search, semantic search, and grounded generation.

Model Context Protocol (MCP)
MCP clients, tool servers, and connecting AI agents with external tools and data sources.

Agentic AI
AI agents, tool calling, state management, checkpointers, middleware, human-in-the-loop workflows, and agent orchestration.

LLM Application Development
Prompt engineering, structured outputs, multi-model evaluation, context handling, duplicate detection, and multi-window processing.

AI Observability
LangFuse, Grafana, and Loki for monitoring AI workflows, tracing execution, and troubleshooting failures.

Machine Learning
Supervised, unsupervised, and reinforcement learning; regression, classification, preprocessing, encoding, feature engineering, model evaluation, and overfitting/underfitting.

Deep Learning — Fundamentals
Basic understanding of neural networks, ANN, CNN, RNN, LSTM, Transformers, and diffusion models.

TECHNICAL SKILLS

- **Programming**: Python, SQL
- **AI & LLM**: OpenAI APIs, LangChain, LangGraph, RAG, AI Agents, Prompt Engineering, Tool Calling, MCP, Structured Output
- **Machine Learning**: Supervised Learning, Unsupervised Learning, Regression, Classification, Data Preprocessing, Feature Engineering, Model Evaluation
- **Deep Learning fundamentals**: Neural Networks, ANN, CNN, RNN, LSTM, Transformers
- **Data & Databases**: PostgreSQL, SQLite, ChromaDB, Vector Databases, Embeddings, Semantic Search, BM25, FTS
- **Backend & Frameworks**: FastAPI, Next.js, Streamlit
- **APIs & Integrations**: JIRA REST API, OpenProject, Webhooks, MCP Servers
- **Agentic AI**: State Graphs, Checkpointers, Middleware, Human-in-the-Loop, Multi-step Workflows
- **Observability & Tools**: LangFuse, Grafana, Loki, Docker, NumPy

EDUCATION

Campbellsville University — M.S. Computer Science, GPA 4.0/4.0, 2023–2025

Swarna Bharathi Institute of Science & Technology — B.Tech. Electronics & Communication Engineering, 2018–2022

New Vision Jr College — Intermediate, 94%

PERSONAL INTERESTS

- Hiking & Nature Walks, Earth's Geological History, Cooking, Fitness & Strength Training.

AI/ML Engineer | Generative AI & Agentic AI

Krisemi Design Technologies -Hyderabad, India July 2026 – Present

AI-Powered Meeting Intelligence & Workflow Automation Platform | *Current Enterprise Project*

AI-powered meeting intelligence platform that uses LLMs and agentic workflows to analyze transcripts, extract action items, evaluate task confidence, and automate Jira/OpenProject ticket creation with AI observability.

- Built an AI-powered meeting intelligence platform that analyzes meeting transcripts, extracts actionable tasks, and identifies assignees, deadlines, and projects for automated workflow management.
- Developed multi-step AI workflows to process transcripts, generate structured action items, and support intelligent task tracking across meetings.
- Integrated Jira and OpenProject to create high-confidence action-item tickets and connect AI-generated tasks with real project workflows.
- Improved reliability for long and complex transcripts through multi-window processing, duplicate detection, and evaluation of multiple LLMs for task-extraction accuracy.
- Enhanced the platform for production use by integrating verified cloud LLMs and confidence-based automation for ticket creation.
- Added AI and application observability using LangFuse, Grafana, and Loki to trace workflows, monitor system behavior, and troubleshoot issues.
- Implemented secure, user-specific workflows and tracker integrations to support authenticated access and personalized task management.
- Implemented Clerk-based authentication and authorization with protected routes, user-specific access, and authenticated frontend/backend workflows.

Technologies: Python, FastAPI, PostgreSQL, Next.js, LangChain, LangGraph, RAG, MCP, LLMs, Jira REST API, OpenProject, Docker, LangFuse, Grafana, Loki

PERSONAL LEARNING PROJECTS

Multi-Agentic Application with LLM as Supervisor – LangGraph/ Agentic AI

A LangGraph-based multi-agent warehouse management application that uses an LLM supervisor to route requests to specialized agents for inventory, orders, and analytics.

- Connected a SQLite warehouse database for inventory, order, and operational data.
- Built separate inventory, order, and analytics agents for specialized tasks.
- Used LangGraph for state management, routing, and multi-step agent workflows.
- Implemented an LLM supervisor to understand requests and route them to the appropriate agent.
- Generated simple reports and insights from warehouse data.

Technologies: LangGraph, LangChain, OpenAI APIs, Python, SQLite

Support Knowledge Copilot with Verified Citations - RAG / grounded AI

A RAG-based AI copilot that provides reliable answers from internal documents with supporting evidence.

- Built a hybrid retrieval pipeline using semantic search and BM25 keyword matching.
- Implemented structure-aware chunking to improve retrieval quality.
- Added RRF and reranking to combine and prioritize relevant search results.
- Developed a Golden QA set to evaluate retrieval and answer quality.
- Implemented grounded responses and system prompt behavior to keep answers focused on retrieved evidence.
- Implemented safe fallback responses when sufficient supporting information is unavailable.
- Improved knowledge retrieval to provide accurate and trustworthy answers from internal documents.

Technologies: RAG, OpenAI Embeddings, BM25, RRF, Reranking, Python
